REQUEST FOR PUBLISHED OR GREY LITERATURE:
Mental health support of racialized women at risk of gender-based violence during the COVID-19 pandemic

There has been a dramatic increase in violence against women during the COVID-19 pandemic.

The pandemic is having a differential and higher risk impact on marginalized populations.

We are conducting a rapid synthesis of literature to inform trauma-informed mental health care for racialized women at risk of gender-based violence during the COVID-19 pandemic’s response and recovery phases.

We are asking service providers, researchers, and members of the community, who know of any mental health reports, guidelines, or any type of mental health literature on gender-based violence against women and girls during the COVID-19 pandemic to please email us with details so we can include the sources in our review of available information. We are particularly interested in literature addressing diverse and racialized populations on this topic.

Please email Luz Maria Vazquez at: owhchair@yorku.ca
